

Replace the traditional home phone with FreshPhone

There is a free mobile app that will replace the traditional home phone, it enables customers to manage all their home phone calls seamlessly on their mobile phones. FreshPhone has no setup costs or monthly line and rental fees and one pays less for calls.

There are no hidden costs and no surprises and all FreshPhone to FreshPhone calls are free of charge. Calls to any mobile phone will now only cost 69c (VAT inclusive) and only 39c (VAT inclusive) to any landline and is billed per second.

With FreshPhone, customers are eliminating unnecessary costs and only pay for the calls they make. Customers benefit from low-cost calling, locally and internationally, on a pure per-second billing system with no connection fees or minimum costs.

FreshPhone director, John Woollam says FreshPhone is fast replacing home phones. “FreshPhone is becoming the preferred option for residential users, it has gained phenomenal traction over the past few months. With no contracts or additional hardware costs, FreshPhone is an innovative solution that will disrupt the traditional home phone market.”

The app works on any internet service provider's backbone, if a customer decides to change internet service providers, they do not have to change or find a new telephone service provider.

FreshPhone is a pure prepaid system, curbing the nasty surprise bill at the end of the month. Customers can now keep track of how much they are spending on their calls and they can easily purchase airtime with a MasterCard or Visa Card.

Easy to use

Additionally, the app gives customers access to a simple, easy-to-use dashboard that shows them all the information about their telephone system online. Customers enjoy the ease of seeing all their information in one place, they can log onto their system from anywhere at any time and can access real-time inbound and outbound itemised call history, a standard feature.

Woollam says FreshPhone allows customers to port current geographic telephone numbers at a nominal once-off fee. "No need to change landline numbers when moving home, FreshPhone is a cloud-hosted service that allows customers to take their number anywhere."

"The app is a self-provisioning solution that enables home users to port their existing geographic (011/021/031 etc) home phone number or we will give you a free 087 home phone number to be used on your mobile phone anywhere that has good connectivity," he concludes.

Just log into www.freshphone.co.za, register (receive R5 free airtime) and then download the app from either the [IOS Store](#) or [Google Play](#) store and enter your username and password and off you go.
